145. Binary Tree Postorder Traversal

Given the `root` of a binary tree, return *the postorder traversal of its nodes' values*.

Example 1:

Input: root = [1,null,2,3]
Output: [3,2,1]

Explanation:

Example 2:

Input: root = [1,2,3,4,5,null,8,null,null,6,7,9]

Output: [4,6,7,5,2,9,8,3,1]

Explanation:

Example 3:

Input: root = []

Output: []

Example 4:

Input: root = [1]

Output: [1]

Constraints:

- The number of the nodes in the tree is in the range `[0, 100]`.

- `-100 <= Node.val <= 100`

Follow up: Recursive solution is trivial, could you do it iteratively?

Constraints:

- The number of the nodes in the tree is in the range `[0, 100]`.

- `-100 <= Node.val <= 100`
