Given two strings s and t, return true if t is an anagram of s, and false otherwise.

Example 1:

Input:s = "anagram", t = "nagaram"

Output:true

Example 2:

Input:s = "rat", t = "car"

Output:false

Constraints:

- 1 <= s.length, t.length <= 5 * 10^4
- s and t consist of lowercase English letters.

Follow up: What if the inputs contain Unicode characters? How would you adapt your solution to such a case?
